

# Guidelines for the Construction Requirements concerning Existing Trees

## Site Plan

All terrace trees (trees within 15-20 feet from the edge of the road) must be shown on the site plan. If needed, size and species of the tree will be determined by the Forester/Horticulturist. In addition, proposed routes for equipment access must be shown as well as any proposed areas for material storage.

Any conflicts between building access and terrace trees will be resolved with a meeting at the building site.

The Village Forester/Horticulturist will make periodic site checks to ensure that all ordinances are being met and followed.

SITE PLAN 1" = 40' (SEE ALSO SURVEY FOR FURTHER INFO)
